PROFILE

MSc Human-Computer Interaction graduate at University College Dublin with a Computer Engineering background and hands-on experience in UX research, service design, and prototyping. I design inclusive, evidence-based digital experiences that help people use complex systems with confidence — including those without technical backgrounds. My current work focuses on how non-engineers learn to adopt enterprise AI tools, sitting directly at the intersection of user experience, learning, and the future of work. Eager to apply research-led design to learning-technology challenges in a real-world Irish industry setting.

CORE SKILLS

User research: Semi-structured interviews, survey design, affinity mapping, persona development, heuristic evaluation

Service design: Journey mapping, service mapping, stakeholder analysis, co-design, Moscow prioritisation

Prototyping & design: Figma, Miro, design systems, low- and high-fidelity prototyping, accessible & inclusive design

Build & data: HTML, CSS, JavaScript (interactive prototypes); R, Python

EXPERIENCE

HCI Design Project in Partnership with IBM— Enterprise AI for Non-Engineers 2025 – Present

Industry-partnered design project in collaboration with IBM · University College Dublin

- Leading user research into how non-engineering professionals adopt enterprise AI tools, surfacing their mental models, language, trust relationships, and everyday workflows.
- Investigating real-world adoption barriers such as technical jargon, system complexity, unclear AI outputs, and low confidence in interpreting results.
- Designing an enterprise AI agent concept grounded in research evidence, shaped around non-technical users so that productivity tools genuinely support them rather than burden the people using them.
- Framing the work as a workplace-learning challenge: helping employees build the skills and confidence to use AI effectively in daily work directly relevant to the future of work and learning.

Intern — Edunet Foundation

AI-powered knowledge assistant

- Designed and developed an AI-powered knowledge assistant that automated information retrieval from large document collections using prompt-driven workflows.
- Built intelligent query handling to summarise content, extract insights, and generate contextual responses, improving how users access knowledge.
- Integrated external APIs for automated data processing and real-time responses; iterated on prompt-engineering techniques to improve accuracy and usability.
- Documented use cases and evaluated productivity improvements enabled by AI automation.

Intern — Bhabha Atomic Research Centre

Secure network log-analysis system

- Designed and built a log-analysis system to process SSL VPN activity data and monitor secure network access patterns.
- Created automated parsing modules to extract structured information user sessions, connection attempts, and access behaviour from raw log files.
- Implemented data-processing workflows to flag anomalies and unauthorised access, reducing manual review through rule-based filtering and categorisation.

PROJECTS

Dublin RideSafe — Cycling Safety App

End-to-end UX research & service design case study

- Ran a 20-person research study across active and inactive Dublin cyclists using structured surveys, affinity mapping, and persona development.
- Identified three core service-failure clusters — infrastructure gaps, government disconnect, and aggressive driver culture — revealing systemic barriers beyond the interface.
- Facilitated a MoSCoW prioritisation workshop with a 5-person cross-functional team to align features with user needs.
- Iterated through two lo-fi rounds before producing a hi-fi Figma prototype, validated against Nielsen & Molich's 10 heuristics; key features included personalised safety routing, voice crisis reporting, civic engagement voting, and community hazard reporting.

TFI Leap Card App Redesign — UX Case Study

Citizen-centred public-service redesign

- Redesigned the TFI Leap Card app to reduce friction in top-up flows and support better travel decisions for Dublin commuters.
- Mapped the end-to-end journey to pinpoint pain points across top-ups, balance visibility, and transport updates.
- Designed NFC-based auto top-up, clearer information architecture, and live travel integration, applying accessibility and inclusive-design principles aligned with public-service standards.

EDUCATION

MSc Human-Computer Interaction — University College Dublin

Sept 2025 – Aug 2026

- GPA 3.52 (Till Semester 2).

BE Computer Engineering — Terna Engineering College

2021 – 2025

- CGPA 8.44 / 10.

LEADERSHIP & ACTIVITIES

- **Treasurer, Computer Society of India** — organised technical events and hackathons.
- **NSS Volunteer** — 120+ hours of community service.

WORK ELIGIBILITY

Non-EEA student currently on Stamp 2, completing an MSc (NFQ Level 9) at UCD in Aug 2026. Eligible for the Third Level Graduate Programme (Stamp 1G) on completion, permitting full-time work for up to 24 months.
